

# POINT OF SALE

## THE SUITE

Store Management Suite (SMS) is a client-based software solution that provides regional and national retailers with seamless, integrated management of the back office, corporate office, warehouse and all aspects of the retail enterprise. The suite contains modules that are typically outsourced, and ensures all necessary data is shared when, how, and with whom needs it. Instant connectivity, anywhere in the enterprise, on any connected device, is reality.

## THE OFFER

SMS offers the most advanced, most adaptable transactions engine in the industry today. The front end module is fast and flexible, safe and easy to use. It offers more ways to sell product, provides more transactional details for superior reporting capabilities, and provides tighter security measures to aid in loss prevention.

The POS is flexible enough to support multiple input combinations within the same environment, plus user interfaces can easily be customized for look and desired flow. Multi-layered menu options are available for drill down capabilities, and the system is fully capable of bidirectional communication from within a transaction. Such integration offers virtually unlimited possibilities with third party applications, including loyalty and data collection services.

The seamless and fully integrated pricing and promotions engines offer unparalleled possibilities too. Now, true transaction based promotions are not only possible, but easier to implement and control, with no cashier intervention required.
